

Final Report for
Project Ending December 31, 2004

Project Title: Architectural and Engineering Design Work for the Nevada Cancer Institute Facility

Grant No: DE-FG02-03CH11156

Principal Investigator: Heather Murren, President

Project description:

The purpose of this project was to complete the architectural and engineering design, program planning, and other preliminary work necessary to construct the new Nevada Cancer Institute facility. These goals were accomplished with the construction of a new building of approximately 119,000 gross square feet. The facility houses the diagnostic and radio therapeutic treatment laboratories, radiation oncology treatment facility, physician offices, and clinical research areas.

The following goals were accomplished:

Goal 1: Architectural designs were completed and engineering and construction management services were accomplished.

Goal 2: Construction materials and equipment contracts were competitively procured.

Goal 3: The project was appropriately managed and completed on schedule.
